CAT MANAGEMENT SYSTEM

Analyst Training Manual

A working guide to Client Management (CM) and Time Management (TM) for Analyst I, Analyst II, and Analytics Lead roles.

Audience: CAT Analysts (Analyst I, Analyst II, Analytics Leads) · Version 1.1 · September 2026

CONTENTS

Table of Contents

01 **Getting Started** — 3
What CMS is for, navigation, your role

02 **Finding Your Work (Home)** — 6
Summary tiles, the Client / Project list

03 **Clients** — 8
Viewing and creating client records

04 **Projects** — 9
Tabs, services, and project data

05 **Calendar & Team Communications** — 11
Owners, Notify Team, automatic email

06 **Entering Time** — 12
TM weekly page, Client & Non-Client Time

07 **Reports & Dashboards** — 14
Project reports, PM Dashboard

08 **CatAI** — 15
Preview — not yet connected to an LLM

09 **What Not To Do** — 16
Admin console and delete actions to avoid

10 **Quick Reference** — 17
Glossary and common tasks checklist

SECTION 1.1 – 1.2

What CMS Is For

The CAT team's workspace for client and project work. Opening CMS lands you on the Select Application hub, with three tiles. CM and TM are the working applications; CatAI is a preview (Section 8).

CM

Client Management

Clients, projects, calendar, files, notes, and reports. Use CM to look up a project, update calendar items, upload data, or generate a report.

TM

Time Management

Weekly time entry and utilization reporting, by CAT user and week. Client-project hours come from the calendar tasks maintained in CM.

AI

CatAI

PREVIEW ONLY

Ask questions about clients, projects, and work in natural language. Not yet connected to an LLM — see Section 8 before relying on it.

How they connect: The user group on a project decides who is on the team and which projects appear in TM. Calendar items become the task rows you charge time against. Online/Offline status changes TM grouping. Hours saved in TM and on the project Time tracker are the same records.

SECTION 1.3

Finding Your Way Around

The left sidebar is always visible. Its items change depending on whether you're on the hub, in CM, or in TM.

Hub (or in CatAI)

- Home — stay on / return to hub
- Open CM, Open TM, Open CatAI — the three tiles
- Admin — not typical analyst work
- CatAI has no sidebar of its own

Client Management

- Home — return to hub
- New Project — start a project
- Dashboard — portfolio & client health
- Admin — not typical analyst work

Time Management

- Home — return to hub
- Dashboard — utilization & hours
- Admin — not typical analyst work

Tip: "Home" always means the application hub — not the CM project list. Dashboard is a different screen in each workspace. CatAI is a hub tile (Open CatAI), not a CM menu item.

SECTION 1.4

Your Role on a Project

CMS has no separate analyst login. Your work is defined by two things:

1. You are a CAT department user (you appear in TM's CAT user list).
2. You are a member of one or more user groups, each with a project role.

If you can't find a project in TM, you're usually missing from that project's user group — ask a lead or admin to add you.

What Analyst I / II should be able to do

- Open projects from CM Home
- Update calendar items; mark work complete
- Notify the user group when calendar is ready
- Upload/download project data; add notes
- Enter weekly time; generate reports

Role	Typical meaning
Analytics Lead	Owns analytics for the client; shown in Home filters/dashboards
Analyst I	Lead analyst on the project
Analyst II	Support analyst on the project
Account Executive	Relationship manager (client-facing, not CAT delivery)
Broker / Broker II / III	Broker team members on the account
Manager	Management member of the user group

SECTION 2

Finding Your Work: Home

Open Client Management from the hub. Four tiles summarize your current filtered view; below sits the Client / Project list.

Active Projects

Count of active projects in the current filter

Total Revenue (USD)

Revenue for those active projects

Online Projects

Count of projects currently marked Online

Online Revenue

Revenue for online projects

Client / Project List — how to use the grid

- **Click a row** — Select it — then open with Edit
- **Double-click a row** — Open or create a project for that client
- **Right-click a row** — Report options (Generate Report / Send)
- **Click a column header** — Sort the grid

Default view

The list opens to Online projects for all clients — the working set you'll use most days. Your last filter choices are remembered for the session.

Avoid: Bulk import and Delete on Home unless a lead/administrator has asked you to.

SECTION 2.3

Filter, Sort, and Search

Filters sit above the Client / Project list grid, letting you narrow down to the work you need.

Filter	Typical use
Business Unit	Limit to one business unit
Business Class	Limit to one class
Status	Limit by project status
Online	Online, Offline, or All
Analytics Lead	Show work owned by a lead (incl. yourself)
Client	Jump to one client
Project Type	Limit by project type

Default view: the list opens to Online projects for all clients — the working set you'll use most days.

Buttons

- **Apply filters** — refresh the list with current filter values
- **Clear all** — reset to all clients with status Online
- **Refresh table** — reload the list from the database
- **Edit** — open the selected row
- **Delete** — permanent hard delete — do not use this as an analyst

Your last filter choices are remembered for the session, so returning to Home usually keeps the view you had.

SECTION 3

Clients

Most of the time, client info lives on the project's Client Info tab. Standalone client pages are only for creating a new client or correcting classification.

3.1 View client details from a project

Open the project → Client Info tab. You'll see:

- Client — locked on an existing project
- Client name & Short name — read-only
- Business Unit, Business Class, Client Type, Status — editable dropdowns

Update classification from those dropdowns, then Save. Client name itself is not renamed here — edit the client record, or ask Admin.

Only create a client when asked — duplicates create duplicate Home rows. Never Soft-delete or Restore Client without instruction.

3.2 Create or edit a client

To create a client

1. Go to /clients/new (or ask a lead)
2. Complete Name, Short Name, Business Unit/Class, Category, Type, Status
3. Click Save Client

To edit a client

Open the client from the directory (or a known client ID), change the fields that need correction, and click Save Client.

SECTION 4

Projects: Tabs at a Glance

A project is the working record for CAT delivery. Work is organized in tabs — most have their own Save and Cancel.

Tab	Available	Purpose
Client Info	New & Edit	Who the client is, how classified
Project Info	New & Edit	Number, name, user group, dates, status, online flag, revenue
Project Data	New & Edit	Analysis files — upload, download, email
Services	New & Edit	Service catalog; adds rows to Calendar
Analysis Profile	New & Edit	Moody's / Verisk BAR settings
Calendar	New & Edit	Deliverables, meetings, tasks, owners, dates
Time tracker	New & Edit	Weekly hours for this project
Revenue history	New & Edit	Revenue changes over time
Notes	New & Edit	Project notes

Save behavior

- New project: one Save Project button creates the record and writes queued files, calendar items, notes.
- Existing project: each tab saves independently.
- Exception: the Online checkbox saves the instant you toggle it.
- Unsaved tab changes are lost if you navigate away — save before switching tabs.

SECTIONS 4.4 – 4.5

Building the Task List: Services & Data

Services → Calendar

1. Filter or scroll the service catalog
2. Check services this project will deliver (Select all / Clear all)
3. Click Add to Project
4. App creates matching Calendar rows and switches you to the Calendar tab
5. Save the Calendar tab — new rows are lost otherwise

This is the usual way to build the first task list you'll charge time against.

Project Data

Files that support the analysis — not the project report PDF.

Classifications: Source · Exposure · Loss · Claims · Correspondence · Submission

1. Click Add Data, choose the file
2. Set Classification, Version (1–20), Data As Of (required)
3. Mark current when it's the version to use
4. Save — on a new project, files queue until Save Project

Existing files: click to select, double-click to edit, Download file, or Email file (opens an Outlook draft).

SECTION 5

Calendar & Team Communications

The Calendar tab is both the analytics calendar and the task list used for time entry. Types: Deliverable, Meeting, Task (default), Other.

Automatic owner email

Sent automatically after you Save the calendar, when every active item has an owner and assignments are new or changed. Subject: “Analytics calendar tasks assigned – {Project}”.

Notify Team (manual)

Use when the calendar is ready for review. Save the tab, then click Notify Team. To: user group members with email · CC: Scott.Christian@bmsgroup.com · links to the Calendar tab.

Assigning owners

- Confirm User Group is set on Project Info (required for owners & Notify Team)
- Choose an owner from -- Owner -- on each row
- Assign yourself or teammates as appropriate, then Save

Good practice

- Set Received when work/data arrives; leave Completed blank while in progress
- Keep completed items' title and owner intact for TM history/reports
- Only remove a row added in error — check with a lead before deleting a task with time charged

SECTIONS 6 – 6.1

Entering Time

There are two places to enter hours — they write the same project time. There is no submit or approval step; Save time writes the week immediately.

Place	Best for
TM weekly page	Your full week — all client projects plus non-client time
Time tracker tab (on a project)	Hours for one project while you're already there

Weekly Time Management — steps

1. From the hub, click Open TM
2. In CAT user, select your name (grid won't load until you do)
3. Set the week — Monday to Sunday
4. Enter hours on Client Time and/or Non-Client Time
5. Click Save time — both tabs save together

Rules to remember

- Hours must be between 0 and 24 per cell
- Enter time as yourself — don't enter another CAT user's time unless asked
- Changing week or CAT user without saving discards on-screen edits
- No manager approval queue — saved time is live for dashboards and reports immediately
- TM Dashboard flags weeks under 32 hours as Incomplete

SECTIONS 6.2 – 6.3

Client Time & Non-Client Time

Client Time

Projects are grouped as Online and Offline Projects, using the same online dots as CM.

1. Expand a project (or Expand all / Collapse all)
2. For each Service/task row, type hours Mon–Sun
3. Day totals and week total update live
4. Open project jumps to that project's Time tracker

If a project shows "No calendar services/tasks yet," nothing can be charged until CM calendar items are added.

Non-Client Time

Standard categories:

Meetings	Holidays
PTO	Travel
Training	CSI
Moody's MAT	Verisk MAT
Peril Advisory	Administrative

Only add categories you actually used that week — empty categories don't need to sit on the grid.

Allocate block of time (Time tracker only): choose Day + Hours, select tasks, distribute evenly — marked "Allocated" vs. typed "Exact."

SECTION 7

Reports & Dashboards

Generate a project report

A PDF snapshot from Home (right-click → Generate Report) or from any saved project tab. Includes client/project info, user group roster, data files, services, calendar, time by analyst/task, and notes.

Generate Report & Send

From Home, right-click → Generate Report & Send. Builds the same PDF and opens an Outlook draft with it attached and CAT CC addresses included — the preferred way to email a full project pack. For a single file, use Email file on Project Data instead.

PM Dashboard (CM) — portfolio view

Global filters: Business Unit, Business Class, Project Status, Client Status, date range.

Tab	What you'll see
Executive Overview	Renewal timeline, revenue tiers, aging; export Executive PDF
Project Portfolio & Pipeline	Begin-month / pipeline charts, project type views
Service Coverage	Service matrix by client or project
Client Health	Status and revenue health

Drill from a chart into a project

1. Click a chart segment or bar
2. A drill-down grid lists the underlying projects
3. Open a row to Edit Project

Clear the drill (or change filters) to return to the full dashboard.

SECTION 8

CatAI — Preview, Not Yet Live

CRITICAL: CatAI is not yet connected to a large language model (LLM). Do not rely on it for project facts, time, or client guidance until a future release is announced.

AI

A third hub tile — Open CatAI — next to CM and TM. It has no CM sidebar entry.

"Hi! I am CatAI. Ask me anything about your work, projects, or clients."

How to open it

1. Click Home (if not already on the hub)
2. Click Open CatAI
3. You'll see a chat transcript, Message box, and Send

No working LLM-backed answers yet — "Unable to reach CatAI" is expected here.

What to expect in this release

- Open the page and see the chat layout (You / CatAI messages, "CatAI is typing…", Send)
- No working LLM-backed answers yet
- Return to real work with Home, then Open CM or Open TM

After a future LLM release

Type a question, click Send, read the reply in-thread. Treat answers as a starting point — confirm anything that affects a deliverable, owner, or time entry in the project itself.

SECTION 9

What Not To Do

CMS does not block Admin or delete actions — that doesn't make them analyst work. Stay out of the following unless a lead or administrator has given you a specific task.

Admin console tabs — not analyst work

- Server — database connection settings
- Business Unit / Class / Client Type / Project Types — firm-wide reference data
- Users — records, photos, bulk import, hard delete
- User Role — role catalog
- UserGroup — creating groups, assigning members
- Clients (Admin) — firm-wide maintenance, bulk import
- Services / Service Category — catalog
- Data Audit — linkage checks, ops/lead use

Home & project actions to avoid

- Bulk import of clients/projects from CSV
- Delete / Hard delete on the Home grid (permanent)
- Soft-delete of clients or projects, except when instructed
- Entering another CAT user's time without a request
- Changing user group membership or dropping a group from a live project
- Deleting calendar tasks that already have time
- Deleting revenue history rows without a lead's confirmation

If you opened Admin by accident, click Home and return to CM or TM.

SECTION 10.1

Glossary

Key terms used throughout CMS and this manual.

Term	Meaning
CMS	This application (Cat Management System)
CM	Client Management — clients, projects, calendar, files, reports
TM	Time Management — weekly hours and utilization
Hub	First screen; choose CM, TM, or CatAI. Sidebar Home returns here
User group	The project team. Controls owners, Notify Team, TM visibility
User role	Job on that team (Analyst I, II, Analytics Lead, others)
Analytics Lead	Analytics owner; used in Home filters and dashboards
CAT user	CAT department person who can enter TM time
Online / Offline project	In progress / not in progress; grouped separately in TM
Calendar item	Deliverable, meeting, task, or other row; a time-entry task

Term	Meaning
Owner	User-group member responsible for a calendar item
Notify Team	Manual email to the user group with a calendar link
Automatic owner email	System email when every calendar item has an owner
Exact / Allocated time	Hours you typed / hours split across tasks evenly
Incomplete week	Some hours logged but fewer than 32 for the week
Project report	PDF pack of client, team, data, services, calendar, time
Project Data	Uploaded analysis files (source, exposure, loss, etc.)
Analysis Profile	Moody's / Verisk BAR configuration on the project
CatAI	Hub app for a future LLM assistant — not connected yet

SECTION 10.2

Quick Reference: Common Tasks Checklist

Start of day

- ☐ Open the hub → Open CM
- ☐ Confirm Home filter (default: Online)
- ☐ Filter Analytics Lead or Client if focusing
- ☐ Open each project for today

Taking on a project

- ☐ Confirm you're on the user group
- ☐ Review Calendar; add/complete items
- ☐ Assign owners and Save
- ☐ Notify Team if needed
- ☐ Upload/download data; add a Note

Entering time

- ☐ Open TM → select yourself as CAT user
- ☐ Set the correct week
- ☐ Enter Client & Non-Client Time
- ☐ Save time
- ☐ Check TM Dashboard for incomplete weeks

Needing a report

- ☐ Generate Report from Home or the project
- ☐ Generate Report & Send to email a full pack
- ☐ Email file on Project Data for a single file

When you're lost: sidebar Home → hub → Open CM, Open TM, or Open CatAI (preview only, not LLM-backed). Use Send Feedback on CM Home if something looks wrong.

You're ready to get started

Use Section 10 as your day-to-day checklist. When in doubt, confirm in the project itself — and check with a lead before touching Admin or delete actions. CatAI is preview only for now.
